

How to check the Browsing History on your Child's iPad

There are several Browsers that can be downloaded and used to surf the internet on an iPad. The 2 main browsers are Safari and Chrome. This article will show you how to search the browsing history of both.

1. Safari

Open up Safari on the iPad.

Click the open book icon. *(Circled in Yellow)*

Click the History icon. *(Circled in Yellow)*

Safari's browsing history should now be displayed on your iPad screen. Notice in the example that sites visited earlier today, such as About Computing & Technology, are displayed individually. Sites that were visited on previous days are separated into sub-menus. To view a particular day's browsing history, simply select the appropriate date from the menu.

When a specific entry in the iPad's browsing history is selected, the Safari browser immediately takes you to that particular Web page.

2. Chrome

Open up Chrome on the iPad.

Click the dropdown icon. *(Circled in Yellow)*

Chrome's browsing history should now be displayed on your iPad screen. Each line lists a different site that has been visited.
